Covers Part #7694

Universal Whip Light Mount Installation Instructions

Kit contents:

- Whip light mount (upper & lower)
- Body cutting template
- 3x12mm button-head cap screws (BCS) (4)
- 3x12mm countersunk cap screws (CCS) (2)

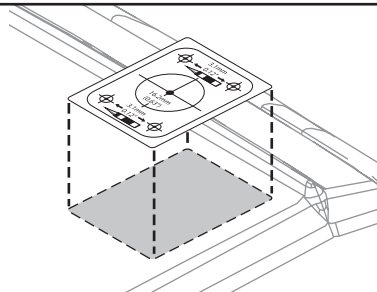

Tools needed:

- 2.0 mm hex wrench
- Tapered body reamer (part #3433 or #3433X, sold separately)

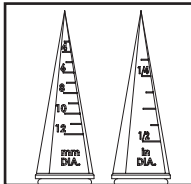

Use this mount to install the #10992 series whip lights (sold separately). The 3-volt accessory power supply (part #6588X) and extension harness (part #10959) are required to power the whip lights (*each sold separately*). Many Traxxas vehicles have built-in mounting locations for the power supply, either on the body or chassis. If your vehicle does not include a mounting location, determine an appropriate location on the body or chassis to mount the power supply.

1. Peel the backing from the included self-adhesive cutting template. Install the template on the desired location of vehicle body. Using a tapered body reamer, carefully cut holes in the body.

IMPORTANT! Before placing the cutting template in the chosen location, make sure there is enough clearance underneath the body for the whip light assembly once the body is installed on the chassis.

Tapered Body Reamer
Diameter Measurements

CAUTION: RISK OF INJURY!

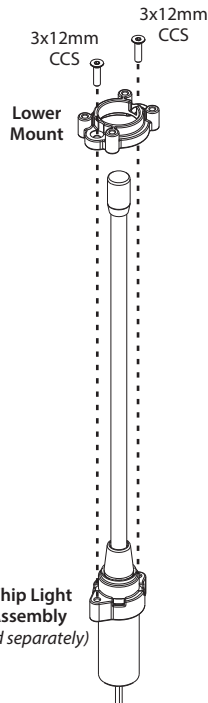

Use care with hobby knives, tapered reamers, and other cutting tools as they are extremely sharp and can cause severe injury, deep cuts, and/or punctures.

(1-888-872-9927) (U.S. residents only)

2. Install the whip light assembly (*sold separately*) onto the lower mount.

3. Align the lower mount with the reamed holes on the underside of the body and secure the whip light/mount assembly to the upper mount on the outside of the body.
