

PERFECT PLASTIC PUTTY

Its more than just Putty!

Jezz Colman shows you how to fill fine gaps, create weld seams and mud spatter

Build Photography by Jezz Coleman

PERFECT PLASTIC PUTTY IS A ONE-PART, FAST-DRYING, SUPERFINE FILLER WITH GOOD ADHESION AND SANDING properties on plastic, and is easily used, even in awkward areas and can be cleaned-up with water. Here's how. *Military*

Builder Jezz Coleman is using the 1:48 Tamiya 'Dingo' Scout Car and Deluxe Materials Perfect Plastic Putty and Pin-Point Syringe Kit in this guide

You can use Perfect Plastic Putty for scratch or dent repairs. Just squeeze a thin line of putty from the tube using the blue nozzle attached. Make sure your hands are clean or wear gloves

Use the spatula in preference to a cocktail stick to carefully spread the putty

Once dry, polish carefully with a fine grade sanding stick or similar

You can also apply the putty for extra fine work using the Pin-Point Syringe Kit

You can also use this method to create weld seams or fill very small joints

Once again sand with very fine grade material

You can also colour Perfect Plastic Putty and use this for adding mud or spatter. Using a palette or similar, mix Perfect Plastic Putty with a small amount of water based paint until you get a smooth paste, and add this into the Syringe

The select a suitable tip, and apply to your model

Then simply blend, and add pigments until you have the desired effect
